

Deep Learning for Format Compliance Checking

Alice Lee, Bob Chen
State University, Springfield

ABSTRACT

The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections. The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections.

1. Introduction

The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections. The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections.

Prior systems rely on heuristics over rendered pages instead of structured models.

Results

The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections. The proposed approach evaluates formatting compliance by parsing the document model directly and comparing extracted rules against observed typography across all sections.

Conclusion

Automated compliance checking saves reviewers time and helps authors fix issues early.
